 - Auto-Duck Smart (Music Fade, Voice Control) -
 - Auto-Duck Ignore this Track -
- Auto-Duck Track is Control. Auto-Duck Fade this Track. MixPad F
 ade-In Fade-Out,

The window displays a ducking curve at the top, showing a signal level that drops from 0 dB to -30 dB over a 500 ms attack period, remains at -30 dB for a duration, and then rises back to 0 dB over a 500 ms release period. Below the curve, the 'Auto-Duck Smart (Music Fade, Voice Control)' checkbox is checked. The 'Control Tracks' and 'Duck Tracks' sections each contain a list of tracks, all currently unchecked. The 'Settings' section includes three sliders: Threshold (dB) at -30, Attenuation (dB) at -30, and Attack / Fade-In (ms) at 500. The 'Release / Fade-Out (ms)' and 'Hold (ms)' sections each have a slider set to 500. A 'Restore Default' button is located below the sliders. At the bottom right, there are 'Close' and 'Help' buttons.
